

Dmitry Antonov

Senior Frontend Engineer · Vue.js · TypeScript · Design Systems · Real-Time Web Apps · iGaming

I own Vue 3 + TypeScript frontends for real-time, multi-brand products – architecture, design system, and the metrics after ship. Open to Senior Frontend and UI Platform roles. Remote from Punta del Este, Uruguay.

6+ years	3 brands	−30%	2.0s → 1.5s	60 / 30 FPS
Vue / TypeScript	one Vue 3 codebase	JS bundle	Lighthouse load	desktop / mobile gameplay UI

ABOUT

I ship Vue, React, and TypeScript products end to end: spec, architecture, UI, tests, then the numbers. At Looptain that was one codebase for three live brands, a token-driven design system, and real-time gameplay plus wallet sync over WebSockets. I am now building Noxaren, a white-label demo casino: React player app, operator console, and the NestJS API behind them. Animation pipelines that hold 60/30 FPS. A JavaScript bundle cut by about 30%. Lighthouse load from ~2.0s to ~1.5s. PostHog owned on the frontend – flags, experiments, offer timing. At Looptain I worked with product, design, backend, QA, and data in a six-engineer team. Native Russian. English for speech, writing, and technical docs. I use AI as leverage, not as the author: research, scaffolding, refactors, and first drafts. Architecture, taste, and review stay mine. I do not ship generated slop. If it goes out, I can defend every line.

Senior Frontend Engineer

Noxaren

Building Noxaren, a white-label demo casino: player app, operator console, and the NestJS API. Virtual NOX only. The server settles every result.

- Built the React player around four modes that do not share a runtime. Crash keeps a live multiplier curve, a tracking camera, a 3D ship, and other players' cash-outs on one frame. Plinko draws many balls through a peg board that still has to land the server's bucket. Chicken hops a scrolling road while traffic runs in lanes ahead. Tower is a floor-by-floor pick: a safe door climbs the board by a measured row, a trap blows the door and reveals the floor.
- Game and wallet state over Socket.IO. The server settles every result; the client owns the motion and the interaction.
- White-label theme tokens and brand assets so one frontend reskins without forking the game UI.
- Shipped the operator console (React, MUI): users, risk alerts, bans, balance adjustments, per-game RTP, VIP, and retention on the same API.

React 19 · TypeScript · Vite · Tailwind · TanStack Query · Socket.IO · MUI

Senior Frontend Developer

Looptain.Limited

Owned the Vue 3 + TypeScript frontend for a real-time web platform: architecture, design system, gameplay UI, wallet, and product analytics. Spec → ship → metrics with product, design, backend, QA, and data.

- Built and maintained core real-time surfaces (crate opening, roulette, case battles, miner) with low-latency WebSocket game state and wallet sync for hundreds of concurrent players.
- Owned the V2 UI platform: 50+ reusable components, Storybook, Figma design tokens; one codebase serving 3 production brands.
- Cut JS bundle ~30% (Vite analyzer: code splitting, deps, build config) and Lighthouse load ~2.0s → ~1.5s (lazy routes, asset delivery, render strategy).
- Engineered animation pipelines that hold 60/30 FPS on crate and gameplay UI (render + DOM budgets, mobile and desktop).
- Designed wallet and transaction UI synced with backend over REST and WebSockets.
- Owned frontend PostHog: SDK, identify, feature flags, experiments, session replay, surveys; offer-modal targeting with backend and product.
- Code review and architecture guidance in a 6-engineer team; Vitest/Jest and Playwright on gameplay and money paths.

Middle+ Frontend Developer

Insider

Customer-engagement and marketing automation platform used by global enterprise clients.

- Shipped complex Vue.js and vanilla JavaScript UI integrated with PHP and Go APIs.
- Designed and published internal NPM packages reused across multiple frontend projects.
- Contributed to frontend architecture and component standards with backend and product.

Middle Frontend Developer

Unicode

Visual website constructor – a Tilda-style site builder for user-generated pages.

- Built and maintained the Vue.js editor and site-rendering UI: layout, blocks, preview, and publish.
- Integrated frontend with Python APIs for save/load, assets, and publish.
- Improved desktop and mobile performance of the constructor and the generated sites.
- Automated tests with Jest on critical editor and publish paths.
- Mentored junior developers and reviewed PRs with design and backend.

Junior+ / Pre-Middle Frontend Developer

SEDEMO Trading and Investments

Real-time gaming / case-opening platform – the same product class as the later roles.

- Built responsive Vue.js and Nuxt.js UI for crate/case flows and related game surfaces.
- Integrated frontend with PHP APIs for catalog, open/result, and user state.
- Improved performance and layout across desktop and mobile in production.

Vue.js · Nuxt.js · JavaScript · SCSS · REST · PHP

SELECTED WORK

Noxaren

Independent · Aug 2026–present

White-label demo casino: React player app, operator console, and a NestJS API. Virtual NOX only.

Crash holds one camera for the curve, the ship, and every cash-out. Plinko keeps several balls in flight and lands each in the decided bucket. Chicken times a hop against traffic on a road that scrolls to stay centered. Tower climbs one measured floor per safe pick and reveals the floor on a trap. Admin covers users, risk, bans, RTP, VIP, and retention.

React 19 · TypeScript · Vite · Tailwind · Socket.IO · MUI

Multi-brand real-time platform

Looptain · 2024–2026

One Vue 3 + TypeScript frontend serving three live brands, with gameplay and wallet state over WebSockets.

Hundreds of concurrent players on crate, roulette, battles, and miner surfaces. Low-latency game state and wallet sync.

Vue 3 · TypeScript · Pinia · WebSockets · Vite

V2 UI platform

Looptain · design system

Token-driven component library that replaced one-off brand UI with a single production system.

50+ reusable components, Storybook, Figma tokens. One codebase, three production brands, CDN-delivered assets.

Storybook · Figma tokens · Tailwind · SCSS

Client performance program

Looptain · platform

Bundle, load, and frame-budget work on interactive gameplay UI – not a marketing landing page.

JS bundle about −30%. Lighthouse load ~2.0s → ~1.5s. Animation pipelines holding 60/30 FPS on crate and gameplay screens.

Vite · Webpack · Lighthouse · GSAP

Visual site constructor

Unicode · 2020–2021

Editor and renderer for user-generated sites: layout, blocks, preview, publish.

Python API integration for structure and assets. Jest coverage on editor and publish. Mentored juniors on the same codebase.
