Dmitry Antonov

Senior Frontend Engineer · Vue.js · TypeScript · Design Systems · Real-Time Web Apps · iGaming

I own Vue 3 + TypeScript frontends for real-time, multi-brand products - architecture, design system, and the metrics after ship. Open to Senior Frontend and UI Platform roles. Remote.

6+ years Vue / TypeScript | **3 brands** one Vue 3 codebase | **~30%** smaller JS bundle | **2.0s to 1.5s** Lighthouse load | **60 / 30 FPS** desktop / mobile gameplay UI

ABOUT

I ship Vue, React, and TypeScript products end to end: spec, architecture, UI, tests, then the numbers. At Looptain that was one codebase for three live brands, a token-driven design system, and real-time gameplay plus wallet sync over WebSockets. I am now building Noxaren, a casino game platform: React player app, operator console, and the NestJS API behind them.

The work I care about is usually invisible in a GitHub sample. Animation pipelines that hold 60/30 FPS. A JavaScript bundle cut by about 30%. Lighthouse load from ~2.0s to ~1.5s. PostHog owned on the frontend - flags, experiments, offer timing - not bolted on after launch.

I use AI as leverage for research, scaffolding, refactoring, and first drafts, and I set up team AI workflows: Cursor rules, AGENTS.md, agent skills, and review hooks. Architecture and code review stay with me. I do not ship generated slop. If it goes out, I can defend every line.

At Looptain I worked with product, design, backend, QA, and data in a six-engineer team. Across previous teams I have hands-on people management experience: hiring, 1:1s with developers, and leading engineers day to day. Native Russian. English for speech, writing, and technical docs. Remote.

EXPERIENCE

Senior Frontend Engineer
Aug 2026 - Present | 2 mo | Independent · Remote
Noxaren
Building Noxaren, a casino game platform: player app, operator console, and the NestJS API. Virtual NOX only. The server settles every result.

- Built the React + TypeScript player app with four game modes (Crash, Plinko, Chicken, Tower), each with its own real-time rendering loop held at 60 FPS.
- Real-time game and wallet state over Socket.IO with server-authoritative results; the client animates to the settled outcome (multiplier curve, physics landing, multiplayer cash-outs).
- Theme tokens and brand assets so one frontend reskins without forking the game UI.
- Shipped the operator console (React, MUI): users, risk alerts, bans, balance adjustments, per-game RTP, VIP, and retention on the same API.
- pnpm workspaces + Turborepo monorepo: apps/api (NestJS) and apps/web (React + Vite) on shared internal packages (@repo/contracts, game-math, game-sim, provably-fair).
- GitHub Actions CI/CD: lint, typecheck, and tests; Monte Carlo RTP verification over 1M samples; Prisma migrations checked on a fresh database; Docker image builds; automated SSH deploy to a Docker Compose VPS with a health check.
- AI-assisted team workflow in the repo: AGENTS.md, 15 Cursor rules (platform core, API boundaries, game packages, new-game process, pre-commit review, memory leaks, performance), 30 skills, 4 custom subagents, and a preToolUse hook that guards agent edits. Shipped a "Verify with AI" provably-fair feature that builds an audit prompt from round data.

Senior Frontend Developer
May 2024 - Oct 2026 | 2 yr 5 mo | Remote
Looptain.Limited
Owned the Vue 3 + TypeScript frontend for a real-time web platform: architecture, design system, gameplay UI, wallet, and product analytics. Spec → ship → metrics with product, design, backend, QA, and data.

- Built and maintained core real-time surfaces (real-time case opening, roulette, case battles, miner) over WebSockets, with game and wallet state synced with the backend for several hundred concurrent users.
- Owned the V2 UI platform: 50+ reusable components, Storybook, Figma design tokens; one codebase serving 3 production brands.
- Cut JS bundle ~30% (Vite analyzer: code splitting, deps, build config) and Lighthouse load ~2.0s → ~1.5s (lazy routes, asset delivery, render strategy).
- Engineered animation pipelines that hold 60/30 FPS on case-opening and gameplay UI, including Spine animations at 60 FPS on mobile (render + DOM budgets).
- Designed wallet and transaction UI synced with backend over REST and WebSockets.
- Owned frontend PostHog: SDK, identify, feature flags, experiments, session replay, surveys; offer-modal targeting with backend and product.
- Code review and architecture guidance in a 6-engineer team; Vitest/Jest and Playwright on gameplay and money paths.
- Set up AI-assisted workflows for the team, committed to the repo: AGENTS.md, CLAUDE.md, .cursorrules, and 11 Cursor rules (commit format, pre-commit code review, memory-leak review, test-coverage gate, multi-brand workflow, UI rules), plus pinned GSAP agent skills.

Vue 3 · TypeScript · Pinia · Vite · Tailwind · WebSockets · Storybook · PostHog · Playwright

Freelance Frontend Developer / Independent Projects
Aug 2022 - Apr 2024 | 1 yr 9 mo | Remote
Self-employed
Freelance frontend work and own projects between full-time roles.

- Freelance Vue, Nuxt, and React work for small clients: feature development, refactors, and performance fixes.
- Built a multilingual Nuxt SSR blog from scratch with its own publishing admin, Tailwind UI, and SEO setup (under NDA).
- Own projects to deepen fullstack skills: Node.js / NestJS APIs and real-time features with Socket.IO.

Vue 3 · Nuxt.js · SSR · React · Tailwind · Node.js · NestJS

Middle+ Frontend Developer
Sep 2021 - Jul 2022 | 11 mo | Türkiye · Remote
Insider
Customer-engagement and marketing automation platform used by global enterprise clients.

- Shipped complex Vue.js and vanilla JavaScript UI integrated with PHP and Go APIs.
- Designed and published internal NPM packages reused across multiple frontend projects.
- Contributed to frontend architecture and component standards with backend and product.

Vue.js · JavaScript · NPM · REST · PHP · Go

Middle Frontend Developer
Dec 2020 - Dec 2021 | 1 yr 1 mo · overlap: project handover | Moscow · Remote
Unicode
Visual website constructor - a Tilda-style site builder for user-generated pages.

- Built and maintained the Vue.js editor and site-rendering UI: layout, blocks, preview, and publish.
- Integrated frontend with Python APIs for save/load, assets, and publish.
- Improved desktop and mobile performance of the constructor and the generated sites.
- Automated tests with Jest on critical editor and publish paths.
- Mentored junior developers and reviewed PRs with design and backend.

Vue.js · JavaScript · Jest · REST · Python

Frontend Developer
Dec 2019 - Jan 2021 | 1 yr 2 mo | Poland
SEDEMO Trading and Investments
Real-time gaming / case-opening platform - the same product class as the later roles.

- Built responsive Vue.js and Nuxt.js UI for case-opening flows and related game surfaces.
- Integrated frontend with PHP APIs for catalog, open/result, and user state.
- Improved performance and layout across desktop and mobile in production.

SELECTED WORK

Noxaren
Independent · Aug 2026–present
Casino game platform: React player app, operator console, and a NestJS API. Virtual NOX only.

Four game modes with real-time rendering at 60 FPS, animated to server-authoritative results over Socket.IO; theme tokens for reskins. Admin covers users, risk, bans, RTP, VIP, and retention.
React 19 · TypeScript · Vite · Tailwind · Socket.IO · MUI

Ugu
Independent · own product
Bedtime-tales Telegram bot and React PWA with a web cabinet.

ElevenLabs TTS (eleven_v3) in production; OpenAI GPT-4o tale generation and Whisper STT integrated in code. Docker Compose on a Hetzner VPS behind Caddy (HTTPS), deployed by GitHub Actions.
FastAPI · PostgreSQL · Redis · React PWA · ElevenLabs · OpenAI API · Docker

Multi-brand real-time platform
Looptain · 2024–2026
One Vue 3 + TypeScript frontend serving three live brands, with gameplay and wallet state over WebSockets.

Hundreds of concurrent players on case opening, roulette, case battles, and miner surfaces. Low-latency game state and wallet sync.
Vue 3 · TypeScript · Pinia · WebSockets · Vite

V2 UI platform
Looptain · design system
Token-driven component library that replaced one-off brand UI with a single production system.

50+ reusable components, Storybook, Figma tokens. One codebase, three production brands, CDN-delivered assets.
Storybook · Figma tokens · Tailwind · SCSS

Client performance program
Looptain · platform

Bundle, load, and frame-budget work on interactive gameplay UI - not a marketing landing page.

JS bundle about −30%. Lighthouse load ~2.0s → ~1.5s. Animation pipelines holding 60/30 FPS on case-opening and gameplay screens.
Vite · Webpack · Lighthouse · GSAP

Visual site constructor
Unicode · 2020–2021
Editor and renderer for user-generated sites: layout, blocks, preview, publish.

Python API integration for structure and assets. Jest coverage on editor and publish. Mentored juniors on the same codebase.
Vue.js · Jest · Python APIs
